

These examples show that BNY sends two main email formats.

1. Corporate Action Notification

Corporate Action Notification:

Event ID;
BNY Processing Location;
Security Description;
ISIN;
Corporate Action Type;
Notification Type;
Message ID

Example structure:

Corporate Action Notification:

Event ID:[EVENT_ID];
[BNYDTC / BNYECL];
[SECURITY_DESCRIPTION];
[ISIN];
[EVENT_TYPE];
[NOTIFICATION_TYPE];
[MESSAGE_ID]

Observed corporate action types include:

- SPIN OFF
- CONSENT
- EXCHANGE
- FULL CALL_EARLY REDEMPTION
- FINAL MATURITY
- CONVERSION

Observed notification types include:

- ANNOUNCEMENT
- CANCELLED EVENT NOTIFICATION
- REMINDER 1-REMINDER FOR RESPONSE
- PAYMENT ADVICE
- ACKNOWLEDGEMENT FOR RESPONSE

2. Income Notification

Income Notification:

Event ID;
BNY Processing Location;
Security Description;

ISIN;
Income Type;
Notification Type;
Message ID

Example:

Income Notification:
Event ID:[EVENT_ID];
[BNYDTC];
[SECURITY_DESCRIPTION];
[ISIN];
INTEREST;
DEBIT NOTICE TO CLIENTS;
[MESSAGE_ID]

Important extraction fields

Email metadata

- Notification family: Corporate Action or Income
- Sender
- Recipient
- Email date
- Email subject
- Message ID
- Preparation date

Event identification

- Event ID
- BNY processing location, such as **BNYDTC** or **BNYECL**
- Notification type
- Notification status
- Processing status
- Mandatory/voluntary indicator

Security information

- Security description
- ISIN
- CUSIP, if available
- Ticker, if available
- Currency
- Security type
- Coupon rate
- Maturity date

Corporate action information

- Corporate action type
- Event subtype
- Effective date
- Record date
- Ex-date
- Payment date
- Settlement date
- Old security details
- New security details
- Conversion/exchange ratio
- Redemption amount
- Call price
- Consent terms
- Spin-off details

Election and response information

- Whether an election is required
- Available options
- Default option
- Election deadline
- Response deadline
- Beneficial-owner deadline
- Instructions for responding
- Reminder number
- Acknowledgment status
- Cancellation or withdrawal reason

Position and payment information

- Account number
- Account name
- Eligible quantity
- Position quantity
- Principal amount
- Interest amount
- Redemption amount
- Cash amount
- Currency
- Debit/credit indicator
- Payment calculation details

The most important design choice is to keep `notification_family`, `corporate_action_type`, `income_type`, and `notification_type` as separate fields because BNY uses the same email structure for very different event workflows.

Below is a practical definition of each field for your extraction schema.

Email and notification metadata

Field	Description
<code>notification_family</code>	Broad category of the email: <code>Corporate Action Notification</code> or <code>Income Notification</code> . Extract from the subject prefix.
<code>event_id</code>	Unique identifier for the corporate action or income event. Usually appears after <code>Event ID:</code> in the subject and body.
<code>message_id</code>	Unique identifier for the specific BNY notification message, usually the last value in the subject.
<code>bnyn_location</code>	BNY processing location shown in the subject, such as <code>BNYDTC</code> or <code>BNYECL</code> .
<code>notification_type</code>	Purpose of the notification, such as <code>ANNOUNCEMENT</code> , <code>PAYMENT ADVICE</code> , <code>REMINDER 1-REMINDER FOR RESPONSE</code> , or <code>CANCELLED EVENT NOTIFICATION</code> .
<code>notification_status</code>	Status of the notification or event, such as <code>REPLACEMENT</code> , <code>WITHDRAWAL</code> , <code>CONFIRMED</code> , or <code>CANCELLED</code> .
<code>processing_status</code>	Processing state, such as <code>Confirmed and Complete</code> or <code>Unconfirmed and Incomplete</code> .
<code>mandatory_voluntary_indicator</code>	Whether participation is required or optional: <code>Mandatory</code> or <code>Voluntary</code> .
<code>preparation_date</code>	Date and time when BNY prepared the notification.

sender	Email address sending the notification, for example BaNCS@bny.com.
recipient	Email address receiving the notification.
email_date	Date and time from the email header.
email_subject	Complete original subject line.

Security fields

Field	Description
security_description	Name and description of the security, including issuer, coupon, maturity, and offering type when present.
isin	International Securities Identification Number, such as US07556QBV68.
cusip	Nine-character North American security identifier, if provided.
ticker	Trading symbol of the security, if provided.
currency	Currency associated with the security or payment, such as USD, EUR, or INR.
coupon_rate	Interest/coupon percentage for a debt instrument, such as 7.875%.
maturity_date	Date when the bond or instrument matures. It may also be included in the security description.

Event classification

Field	Description
corporate_action_type	Main corporate action, such as SPIN OFF, CONSENT, EXCHANGE, CONVERSION, FULL CALL, or FINAL MATURITY.
income_type	Income event type, such as INTEREST, DIVIDEND, or PRINCIPAL. Use this primarily for Income Notifications.
event_subtype	More specific description of the action, such as EARLY REDEMPTION, REMINDER FOR RESPONSE, or DEBIT NOTICE TO CLIENTS.

Important event dates

Field	Description
<code>effective_date</code>	Date on which the corporate action becomes effective.
<code>record_date</code>	Date used to determine which holders are eligible for the event.
<code>ex_date</code>	Date from which the security trades without entitlement to the event.
<code>payment_date</code>	Date when cash, securities, interest, or other entitlement is delivered.
<code>settlement_date</code>	Date when the transaction or exchange settles.

These fields may not be present in every notification. The model should return `null` when unavailable rather than infer them.

Conversion, exchange, and spin-off fields

Field	Description
<code>old_security_description</code>	Description of the original security before conversion or exchange.
<code>old_security_isin</code>	ISIN of the original security.
<code>new_security_description</code>	Description of the security received after conversion, exchange, or spin-off.
<code>new_security_isin</code>	ISIN of the new security received.
<code>conversion_ratio</code>	Number of new securities received for each old security.
<code>conversion_price</code>	Price used to calculate the conversion or exchange.
<code>redemption_amount</code>	Amount paid when securities are redeemed or mature.
<code>call_price</code>	Price paid by the issuer for an early/full call.

Election and response fields

Field	Description
<code>election_required</code>	Whether the holder must choose an option.
<code>available_options</code>	All options available to the holder. Store as a list.

<code>default_option</code>	Option automatically applied if no election is submitted.
<code>election_deadline</code>	Deadline for submitting an election.
<code>response_deadline</code>	Deadline for responding to a consent or other event.
<code>reminder_number</code>	Reminder sequence, such as <code>1</code> for <code>REMINDER 1</code> .
<code>cancellation_reason</code>	Reason an event was cancelled, withdrawn, or replaced.

Position and payment fields

Field	Description
<code>account_number</code>	Account or portfolio number associated with the notification.
<code>account_name</code>	Name of the account, fund, or client.
<code>eligible_quantity</code>	Quantity eligible for the corporate action or income payment.
<code>position_quantity</code>	Quantity held in the account at the relevant date.
<code>principal_amount</code>	Principal amount associated with the position or payment.
<code>interest_amount</code>	Interest amount paid, received, or debited.
<code>cash_amount</code>	Cash amount associated with the event.
<code>debit_credit_indicator</code>	Whether the amount is a <code>Debit</code> or <code>Credit</code> .

Recommended handling rules

- Extract values from the body first; use the subject as a fallback.
- Preserve the original text for fields such as `security_description` and `notification_type`.
- Normalize dates to `YYYY-MM-DD` where possible.
- Normalize monetary values to numeric values and retain the currency separately.
- Use `null` for missing fields.
- Use an empty list only for missing list fields such as `available_options`.
- Do not treat `notification_type` as the same thing as `corporate_action_type`.
- A `CANCELLED EVENT NOTIFICATION` or `WITHDRAWAL` should update or cancel an earlier event using the same `event_id`.
